

Introduction

I started my first internship in surfboard payments to learning a more skills I feel like confident to learn keep growing to more skills learned teaching by kousik and everyon tell a self intro they started a problem solving he said solving day to day problem she asked a easier skill and every one said a answers like hobbs of gardening,playing,driving etc

ex. of virot koil his is super batting man He is not a boulier or wicketeer

Skills:

He asked a various types of skills had to tell and he is entered in board and explain

How the skill entired more solving the problems we said more skills to ask and we are asked

Many number of skills he asking about skiills needed for programs or coding we said problem solving decision making he said some basic skills for learning and reading they are basic skills to train internship we can learn .

Problem solving is a more important skills in he is asked question in problem solving convinced said solving day to day problems let he ask car silencer issue and we can change engine oil andas wells mechanical broblem and all picked the third option we understanding the problem solving farmer story there is a river on one side farmer anotherside bag,goose,fox,they need to cross the river by the boat he askes a rate of easier skills to more

Basic problem solving:

They need to cross river with a boat with some conditions there only two can travel with boat they travels with rice,bags otherside leave the fox now leave the goose and take the rice bag again pick the goose leaves it on the other side he asked as how we solved a problem they told so many problems to a mistakes and learn it well he mention another example t shaped bar graph which is good he ask which is correct wat to finish the goalfive more skills related to he told internship more problems to solving skills ex.ms doni is a good wicket keeper he well developed a batting skills and field skills and more then captain skills and decision making skills to forward so many skills to making growing

Solving a logical problem of understanding the questions these are the conditions which all possibilities to more to each other skills I started to draw

the river to make decision to

First of all how we can solve the problems all the possibilities and more skills to be added

Abraham sir we will meet founder of surfboards payments and askin sir managing company he we will the last batches ai we will affect junior software engineering may not affect senior engineering he teled bar graph and even good playing chess and they give more things to

Learn and do it program he started problem solving questuins did look convinced day br day problems to solve answers two more skills related to that internship program to tell that all ways to greated he written one bar graph of bridge crossing of road map the second step to problem solving and understood the questions and solved the problem the first things don,t avoid the problem the we said by checking all the possibilities by solving constraints the problems os many solutions programming are anything need a problems to create a ways to solving the problems

Logical problems:

I get a clear explanation from him he tell about artificial intelligence works how we can adapt to use the experience by him deep learning and how to works he tolds to experience fron ai tools ,gemini ai,Deepak tools sk=he told many skills to learning method to form a learning he asked to name of the skill in a board he tell was the full he has more complex and explained it very well we need to problem solving with the questions has some issues in car cylincer of engine oil of solving a decision to service the car to many timesunderstanding the problem of due to many ways to attending the skills to bying new car by fix it other self change the car by maore complex of problem solving problem like going to mechanic 2 more skills related skills some basic skills to learning to check which is good way to checj the all value by entire problemsvorat develops a batting skills and feilding skills through captaincy and decision makilg it ourselves to v shaped grapes he asked all the to need programs that very well to process the all values he represent a v shaped arry bar graph to some bacic skills to wrote anything some how we finish a board by easier skill and more complex to explained to decision making by internship to process the coding and the skills and with the basics of problem solving to manu ways every to solve the program the second step in understanding problem solvinghe gave a small problem what are the basic skills that will wrote the answer wrote learning ang reading as well as writing he asked as to rate as

individual skills by making more process after he all types of skills like drawing and swimming, driving we need problem solving skills to need more value of skills how to work withn under basics skills to form many items of the first thing avoid a problem by remain the skills

Key skills:

He give one sheet of various skills and he asked to write our top five skills afterv he we wrote learning our top skills we asked learn needed for software engineers
